Noah Thomas

Senior AI Software Engineer | Gen AI, LLMS, RAG & Full-Stack Development

mindiron277@gmail.com +1 (715) 709-7990 Oakland, Maine, USA

SUMMARY

Software engineer and AI developer with 7+ years of experience architecting and deploying intelligent, data-driven systems. Proficient in Python for backend and ML pipelines, and JavaScript/TypeScript for full-stack AI integration. Deep expertise in Generative AI and LLMs, including transformer architectures, Google BERT, and the Hugging Face ecosystem for fine-tuning and model deployment. Skilled in LangChain for orchestrating multi-step agentic workflows that connect LLMs with APIs and proprietary data. Focused on delivering AI solutions that are production-ready, scalable, and grounded in practical utility.

EXPERIENCE

Senior AI Backend Engineer, *Contextual AI* 02/2024 – 08/2026
Mountain View, CA

Architected and delivered enterprise conversational AI platforms, integrating LLM/NLP pipelines with scalable Python backends and cloud-native infrastructure to power intelligent automation across global enterprise deployments.

- Built end-to-end conversational AI agents handling complex business workflows across 4 product lines, engineering LLM/NLP pipelines tailored to high-stakes enterprise use cases.
- Developed scalable Python microservices and REST/GraphQL APIs supporting 50K+ concurrent requests, achieving a 40% reduction in average response latency.
- Led full-stack feature delivery by coupling React frontend components with AI-driven backend logic, cutting time-to-feature by 30%.
- Collaborated with product, UX, and platform leadership to translate business requirements into production-ready AI solutions, consistently shipping on schedule.
- Optimized high-volume deployments to maintain 99.9% uptime across 6+ enterprise channels, improving system resilience under sustained load.
- Owned the full SDLC - architecture, implementation, CI/CD, QA, and post-release iteration - for mission-critical conversational AI systems.

AI Software Engineer, *Simon AI* 12/2019 – 12/2023
New York, NY

Delivered production-ready AI systems end-to-end, applying RAG architectures, Python microservices, and React-based interfaces to accelerate enterprise automation and knowledge discovery workflows.

- Built full-stack AI applications from the ground up across 3 core products, pairing LLM-powered Python backends with React frontends for enterprise user workflows.
- Designed and implemented RAG pipelines connected to internal knowledge bases, improving answer accuracy and reducing hallucinations across 10K+ daily queries.

- Developed high-throughput FastAPI microservices achieving sub-100ms response times with 99.95% availability under sustained enterprise load.
- Integrated third-party platforms and internal tooling to embed real-time automation into existing enterprise ecosystems, eliminating 20+ hours of weekly manual work.
- Established logging, tracing, and alerting pipelines that reduced mean time to resolution (MTTR) by 35% across cloud-based production environments.

Full-Stack AI Engineer, *SimuHealth* 09/2017 – 11/2019
Vancouver, BC

Spearheaded development of AI-powered data activation platforms, fusing first-party data pipelines, LLM intelligence, and modern web interfaces to unlock personalized marketing at enterprise scale.

- Built full-stack features spanning data pipelines, backend services, and React/TypeScript interfaces to power customer segmentation and audience activation across enterprise marketing workflows.
- Authored Python APIs on top of Snowflake and cloud data warehouses, enabling AI-driven audience generation and real-time data access for 8 marketing teams.
- Integrated LLM-based intelligence into core platform workflows, enabling hyper-personalization across 50+ customer segments and expanding automation coverage platform-wide.
- Hardened CI/CD pipelines and deployment configurations, reducing release cycle time by 25% and cutting production incidents by 40%.

EDUCATION

Bachelor's degree in Computer Science, 07/2013 – 06/2017
Nanyang Technological University (NTU) Singapore

SKILLS

Languages & Runtimes
Python, JavaScript, TypeScript, Node.js

Frontend
React, Next.js, HTML/CSS

Data & Storage
PostgreSQL, MongoDB, Redis, FAISS, Vector Databases

AI / ML
Generative AI, LLMs, RAG Architecture, OpenAI API, Transformer Models, Fine-Tuning, Google BERT, Hugging Face, Prompt Engineering, LangChain, Agentic Workflows

Backend & APIs
FastAPI, REST APIs, WebSockets

Cloud & DevOps
AWS, Docker, MLOps, CI/CD, Git
